EN_ADVICE FOR THE USER

Advanced and/or modified driving shafts are allowed only for agonistic events as all the values registered in the logbook (such as number of revolutions and horsepowers) are altered.

The **NUOVA MAZZUCCHELLI** company guarantees the high quality and the reliability of the MMC spare parts and advises to contact only specialized personnel for the assembling of the driving shafts; otherwise the guarantee will not be valid.

ADVANCED DRIVING SHAFT mod. CIAO

We recommend the use of a lightened fibre flywheel to avoid great vibrations and the inevitable breaking of the shaft flywheel.

ADVANCED DRIVING SHAFT mod. VESPA

Our spare part can be used only with the original motor in order to improve its performance. We recommend modifications as follow: we recommend the use of a lightened fibre flywheel (max weight kg. 1,600) to avoid great vibrations and inevitable breaking of the flywheel shaft, valve widening and lightenings etc.)

DRIVING SHAFT WITH MODIFIED STROKE

These spare parts need some modifications both in the timing case and in the reassembling of suction and exhaust chart.
